

Secure Two-Way Smartphone and Tablet Messaging

Answering Cleveland's mobile app, miSecure Messaging, is the HIPAA and HITECH compliant secure two-way messaging on your Android™, Apple® (iPad®, iPhone®, iPod touch®), and BlackBerry® device. Protect your clients, your data and your organization with encrypted messaging while ensuring faster messaging response times.

miSecure Messaging features include:

- **Affordable** – No text or SMS plan needed
 - o Send and Receive **Unlimited** Number of **Messages**
 - o Send and Receive **Unlimited** Number of **Characters** per **Messages**
- **Flexible** – can be used with Apple, Android and some Blackberry devices

- **Secure** – HIPAA and HITECH compliant secure messaging. We do not send data to your device. The application securely logs into the message server and never actually stores the message on the phone. The application is password protected and you can only view the data through a secured connection meaning that your communications and data are encrypted and safe.
- **Easy to use** – just like text messaging, but you can only communicate with contacts in your group/circle.
- **Time Saving** – you and/or your on-call personnel will not have to take time away from your busy schedule to call to confirm receipt of your messages. Just acknowledge us back right from your miSecure application to stop dispatching or for further processing.
- **Unlimited number of licenses** – you can have as many devices in your group as needed.
- **Your data is safe** – cannot copy, paste or forward any of the messages outside of your circle within your licensed devices. If you lose your device, we deactivate the lost device. New devices can be registered using the same login/password you used to setup your original device.
- **Customizable** – recipients control how they want to be alerted when a new message is received. Recipients can customize:
 - o Audio/Visual Settings – indicating how they want to be alerted for new messages.
 - o Persistent Alerts – to determine how often they are alerted about a new message
